DEPI SOFTWARE TESTING TRACK — FINAL PROJECT

Task Assignment & Peer-Review Matrix

Team Structure, Core Responsibilities, Deliverable Ownership, Cross-Functional Peer Reviews, and Role Obligations

Project	Banking Transaction System	**Document**	Task Assignment & Peer-Review Matrix
Prepared By	Somia Rashad (QA Lead)	**Reviewed By**	Project Team

Part 1. Team Overview & Core Responsibilities

Distribution of engineering, architectural, and quality assurance responsibilities across the five-member project team.

Team Member	Assigned Role	Core Project Responsibilities
Somia Rashad	QA Lead & Test Automation Engineer	Master Test Plan, Requirement Traceability Matrix (RTM), comprehensive manual test cases (EP, BVA, Decision Tables), Jira board and defect tracking, Risk Coordinator duties, upfront static review of requirements, and Selenium 4 WebDriver & Postman API automation suites.
Muhammad Sayyid	Tech Lead & Software Architect	System architecture, SQLite database and WAL setup, piaster monetary conversion, Spring Security configuration (authentication, lockout, session timeout, RBAC, IDOR protection), atomic fund transfers and concurrency control, scheduled interest jobs, and mandatory GitHub Pull Request reviews.
Aladdin Ahmed	Core Banking Logic Engineer	Object-oriented account hierarchy (Savings, Checking, and Fixed Deposit), 12-digit Luhn account number generation, domain business rules and withdrawal velocity constraints, deposit/withdrawal domain logic, and JUnit 5 unit testing.
Asmaa Mohamed	Frontend & UI Engineer	User-facing Thymeleaf web pages and responsive forms (registration, login, dashboard, transactions, statements, admin views), permanent HTML element IDs for Selenium automation, client/server field validation bindings, and accessible error/success alert banners.
Aghapy Antonious	Backend Services & Admin Engineer	Customer profile management, customer dashboard aggregation, paginated account statements with date-range and type filtering, UTF-8 CSV statement export pipeline, admin dashboard metrics, customer/account search, account freeze/unfreeze services, and audit log viewing.

Part 2. Deliverable Assignment & Peer-Review Matrix

Every project deliverable and code module has a single Primary Owner and a designated Secondary Reviewer from a different discipline to ensure cross-functional verification.

Deliverable Artifact / System Module	Primary Owner	Secondary Reviewer	Target Schedule
Master Test Plan & Requirement Traceability Matrix (RTM)	Somia Rashad (QA Lead)	Muhammad Sayyid (Tech Lead)	**Week 2**
System Architecture & SQLite Database Setup	Muhammad Sayyid (Tech Lead)	Aghapy Antonious (Backend Services)	**Week 2**
Security, Authentication & RBAC Module	Muhammad Sayyid (Tech Lead)	Aladdin Ahmed (Core Logic)	**Week 3**
Core Account Domain Hierarchy & Business Logic	Aladdin Ahmed (Core Logic)	Somia Rashad (QA Lead)	**Week 4**
Front-End Thymeleaf Interfaces & Stable DOM IDs	Asmaa Mohamed (Frontend & UI)	Aghapy Antonious (Backend Services)	**Week 4**
Postman REST API Automated Test Suite	Somia Rashad (QA Lead)	Aladdin Ahmed (Core Logic)	**Week 5**
Selenium WebDriver UI Automated Test Suite	Somia Rashad (QA Lead)	Muhammad Sayyid (Tech Lead)	**Week 6**
Customer Services, Admin Module & CSV Export Pipeline	Aghapy Antonious (Backend Services)	Asmaa Mohamed (Frontend & UI)	**Week 6**
Final System Demo Preparation & Dry Runs	All Team Members	Muhammad Sayyid & Somia Rashad	**Weeks 7 – 8**

Part 3. Detailed Member Scope & Review Obligations

Comprehensive breakdown of individual ownership boundaries and mandatory peer-review checklists.

Member & Role	Detailed Technical / QA Ownership Scope	Assigned Peer-Review Obligations
1. Somia Rashad (QA Lead & Test Automation Engineer)	Owns end-to-end quality assurance and risk coordination. Conducts static reviews of project requirements, authors the Master Test Plan and Requirement Traceability Matrix (RTM), designs structured functional and security test cases, builds the Selenium 4 WebDriver and Postman automated test suites, and manages Jira for defect triaging and KPI tracking.	• Core Account Domain & Logic (verifying Aladdin Ahmed's implementation against business rules BR-01 to BR-23). • Final Demo Preparation & Dry Run (Co-Lead).

Member & Role	Detailed Technical / QA Ownership Scope	Assigned Peer-Review Obligations
2. Muhammad Sayyid (Tech Lead & Software Architect)	Oversees system architecture, Git workflow governance, and technical decisions. Configures SQLite WAL mode and piaster conversion, implements Spring Security (BCrypt, lockout, idle timeout, RBAC, CSRF, security headers, and IDOR 404 protection), builds the atomic transfer and fee engine with concurrency control, implements scheduled interest/maturity jobs, and performs final Pull Request reviews.	• Master Test Plan & RTM (verifying technical accuracy and requirement coverage with Somia Rashad). • Selenium UI Automated Suite (reviewing Page Object structure and wait strategies). • Final Demo Preparation & Dry Run (Co-Lead).
3. Aladdin Ahmed (Core Banking Logic Engineer)	Owns the core financial domain model. Implements the OOP account hierarchy (Savings, Checking, Fixed Deposit), Luhn 12-digit account number generator, account opening/closing rules, deposit and withdrawal validation, daily/monthly withdrawal velocity limits, and comprehensive JUnit 5 unit tests for domain calculations.	• Security & Authentication Module (reviewing Muhammad Sayyid's auth and role-checking rules). • Postman API Test Suite (reviewing API endpoint assertions and payload coverage with Somia Rashad).
4. Asmaa Mohamed (Frontend & UI Engineer)	Builds the responsive web user interface using Thymeleaf templates and CSS/Bootstrap. Designs forms for registration, login, account creation, deposits, withdrawals, transfer confirmation, statements, and admin panels; assigns unique, permanent HTML element IDs for Selenium automation; and binds field-level validation and error banners.	• Customer Services, Admin Module & CSV Export Pipeline (reviewing Aghapy Antonious's view bindings, pagination parameters, and admin UI integration).
5. Aghapy Antonious (Backend Services & Admin Engineer)	Develops customer service and bank administration modules. Implements customer profile viewing/editing, dashboard balance aggregation, paginated account statement generation with date and type filters, safe UTF-8 CSV file export, and administrator tools (bank reserve metrics, customer name search, account balance-range search, richest customer report, account freeze/unfreeze with audit reasons, and audit log filtering).	• Architecture & Database Setup (reviewing Muhammad Sayyid's initial Spring Boot skeleton, schema, and seed data). • Front-End Interfaces & Stable IDs (reviewing Asmaa Mohamed's Thymeleaf templates and verifying frozen DOM element IDs).
